

OLDE ENGLISH
GEOMETRIC FLOOR TILES

www.oldeenglishtiles.co.uk

Created with versatility in mind

Katrine A with a Classic Border

(See Page 9 for Details)

Our Tiles

The Olde English geometric tile collection has been created with versatility in mind. Recreate a period look, modernise an old design, or develop a pattern of your own. Olde English tiles come in a variety of shapes and sizes and an amazing 25 colours in most of the shapes. The tiles are frost resistant and suitable for both interior and exterior use.

The brochure shows a range of colour combinations in each of the designs, remember though they are just suggestions, feel free to change colours, Olde English tiles give you the freedom to create a new floor which is totally in tune with your home environment.

Fixing Tiles

We recommend that you have your tiles laid by a professional tiler. Tiles should be laid to a sound, flat base, using a cementitious floor tile adhesive and grouted with a fine, cement based, grey floor tile grout. Ask your retailer for advice. For the more intricate designs, aim for grout lines of 1mm or less, adjusting as required to cater for any size differences and for best appearance. Designs with larger tiles (e.g. 100mm and 150mm squares) can use wider grout lines.

Sealing

We recommend sealing these tiles when laid indoors with HG Golvpolish or equivalent, non-permanent sealer. Be sure that the tiling has dried out completely before sealing and that no moisture is trapped under the seal. If moisture is trapped, it will produce a cloudy finish beneath the seal coat – this can only be rectified by stripping the sealer (with HG Remover) and re-sealing. Cleaning should be carried out using HG Superfloor. If a sealer of a different make is used, follow the manufacturer's guidance for cleaning and stripping products. Manufacturers instructions should always be followed, with special attention paid to Health and Safety issues.

EXTERIOR TILING SHOULD NOT BE SEALED, AS THIS CAN COMPROMISE THE FROST RESISTANCE.

Sizes and Colours

Olde English tiles are natural clay products and there may be small variations in both size and shading. Adjust grout lines to allow for dimensional differences. Take the usual precaution of mixing tiles of the same colour from different boxes, to ensure that any colour variations are evenly distributed.

Exterior use

Being fully vitrified, Olde English Tiles are frost resistant. Ensure that exterior tiling is laid so that water cannot pool on it and maintain grouting correctly.

Technical Data:

Thickness	Max 10mm (except Steptreads)
Water absorption	0.1 to 0.5%
Surface resistance	7 - mohs scale
Crush resistance	Min 3200 kgf/cm ²
Flexural strength	Able to withstand min 380 kgf/cm ²
Frost resistance	No damage after 50 tests +200C to -150C
Heat resistance	No change
Slip resistance	European Standard R10

OLDE ENGLISH
GEOMETRIC FLOOR TILES

Tiles should be carefully examined before fixing. Fixing of the tiles constitutes acceptance of their quality. Olde English Tiles accepts no liability for faulty installation work, or the quality or correctness of the tiles once fixed. As far as the law permits, liability is limited to replacement of faulty items or a refund of their cost and excludes any consequential loss, including the cost of removal and refixing.

Colliford

The shapes in this design are available in all 25 colours, below are just a few examples of the colour combinations you can choose from.

Melfort

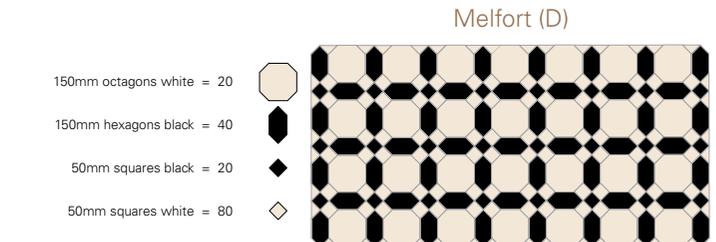

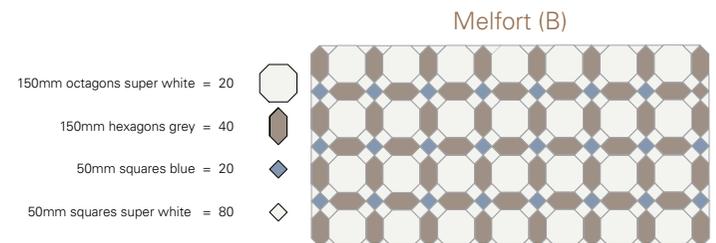

Octagons and hexagons available in 11 colours, squares in all 25. Here are just a few of the colour combinations on offer.

Melfort (C) with ENC 6A

Tiles required per square metre

Encaustic Tiles

Encaustic tiles use thin layers of coloured clay to make up the design. All Olde English encaustic tiles are fully vitrified and so are very hard wearing, as well as being frost resistant.

Unlike printed tiles, these have a very long life expectancy - there are some fitted externally at the factory that are still in fine condition and they are over 100 years old.

Encaustic tiles can be incorporated in most of the designs in this brochure, either as part of the pattern repeats or as central features or corners.

Colliford design featuring encaustic tile ENC 6A

The encaustic tile manufacture process uses thin layers of coloured clay and this can result in some shade differences when compared to equivalent colours in the plain tile range

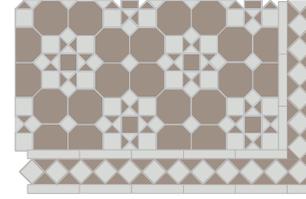

Borders

Available in all 25 colours in most of the shapes* Below are just a few of the colour combinations we offer.

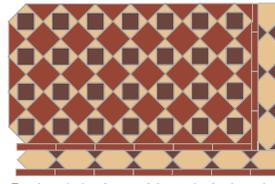

If a wider border is required to improve field layout, or for cutting in uneven edges, a wider rectangle e.g. 150mm x 50 mm, or a rectangle cut from a 150mm square, should be used to replace the 150mm x 25mm rectangle shown.

Carron design with a paladin border

Katrine design with a classic border

Double Dogtooth

(width as shown 150mm)

150x25mm strip brown = 14
 70/70/100mm triangles cognac = 20
 70/70/100mm triangles red = 20

150x25mm strip cognac = 14
 70/70/100mm triangles cognac = 20
 70/70/100mm triangles red = 20

150x25mm strip black = 14
 70/70/100mm triangles white = 20
 70/70/100mm triangles black = 20

Twist

(width as shown 205mm)

150x25mm strip red = 14
 150x25mm strip white = 14
 50mm squares red = 7
 50mm squares white = 7
 50/50/70mm triangles red = 30
 50/50/70mm triangles white = 30

150x25mm strip black = 14
 150x25mm strip white = 14
 50mm squares black = 7
 50mm squares white = 7
 50/50/70mm triangles black = 30
 50/50/70mm triangles white = 30

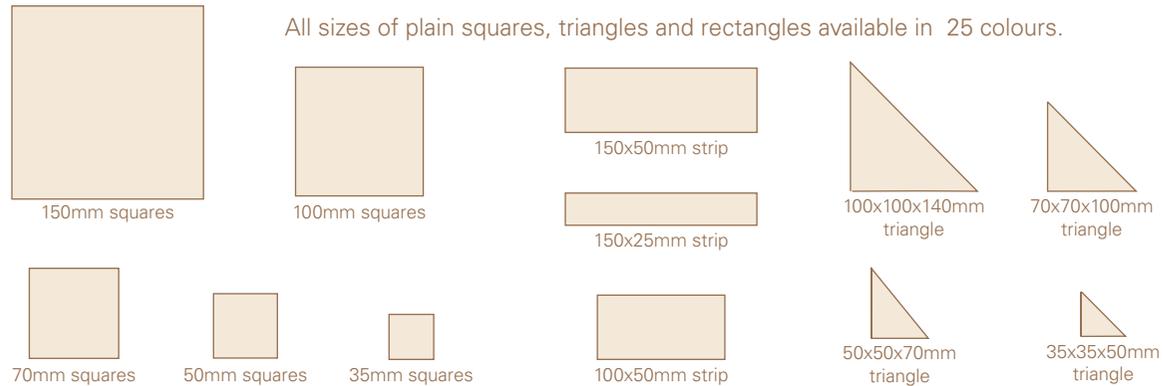

150x25mm strip brown = 14
 150x25mm strip cognac = 14
 50mm squares brown = 7
 50mm squares cognac = 7
 50/50/70mm triangles brown = 30
 50/50/70mm triangles cognac = 30

*hexagons only available in 11 colours, See Colour Chart
